In linguistics, construction grammar groups a number of models of grammar that all subscribe to the idea that knowledge of a language is based on a collection of "form and function pairings". The "function" side covers what is commonly understood as meaning, content, or intent; it usually extends over both conventional fields of semantics and pragmatics. Cognitive linguistics (CL) is an interdisciplinary branch of linguistics, combining knowledge and research from both psychology and linguistics. It describes how language interacts with cognition, how language forms our thoughts, and the evolution of language parallel with the change in the common mindset across time. About us.
